
I press CHAT in the main window, it logs out. Help

Posted by friendlymate - 2009/06/12 19:35

Hello people. I am new to Oohya. I registered and then logged in. As soon as I click that red coloured CHAT button on the top-right of the screen, my account is logged out, and the new chatroom window opens signed out. When i enter the username and password again, it says wrong password.

I can log in the main window but it doesnot sign in in the chatroom window, and a dialog box appears sayin that i have entered the wrong password.

I did the forgot password thingy and it sent a new password on my email id. I rntered that password but I still can not sign in in the chatroom.

HELP!...

=====

I'm not sure what's going on exactly. The only thing I can think of is the database isn't quite sinking up with chat in your case, maybe a server cache issue where your new account for whatever reason isn't being recognized by chat.

It looks like you posted this yesterday, have you gotten into chat successfully yet?
